

The Proceedings

INTERNATIONAL
WORKSHOP ON
SHIP AND PLATFORM
MOTIONS

~~~~~

Edited by  
Ronald W. Yeung

*Sponsored by*  
*The Department of Naval Architecture and Offshore Engineering,*  
*University of California, Berkeley*  
*The National Science Foundation*  
*The Office of Naval Research*

October 26-28, 1983

~~~~~

A limited supply of this clothbound proceedings is available FREE of charge by request, with worldwide S&H cost of US\$10 paid by the requester. Send request to SurfaceWaves@coe.berkeley.edu, with subject title: "IWSPM1983" to indicate shipping address. Checks or drafts should be made payable to UC Regents.

Preface

In the past two decades, rapid progress has been made toward the development of mathematical models for predicting the performance of ships and platforms in realistic sea conditions. Though such mathematical models cannot yet substitute for physical-model testing in tanks, they have become very effective tools for analyzing, and sometimes even optimizing, specific engineering designs. Ship-motion and wave-force calculations are now carried out on a rather routine basis. Their restrictions and limitations are, however, not always well understood. Many important physical phenomena, particularly those in nonlinear regimes, await explanation. The development of nonlinear mathematical models has only just begun.

This workshop was originally conceived in the fall of 1982 by the Analytical Ship-Wave Relations Panel (H-5) of the Society of Naval Architects and Marine Engineers. Members of the panel found it desirable to bring together a community of active and new workers from industry, academia, and research organizations to conduct informal discussions on various hydrodynamic aspects of ship-motion and related problems that were of fundamental and/or practical interest. The response to the call of this meeting was such that the organizing committee found it appropriate to run it as a small international conference. The original workshop spirit was nevertheless well retained by having extended periods of joint discussions on papers presented in the same session, and by the willingness of the audience to participate. Parts of such discussions were transcribed by the session chairmen and are included here. The proceedings contains a sizable number of original contributions that heretofore have not been available in the published literature. It also covers a fairly diverse set of topics that are considered mathematically related to the usual ship/platform motion problems. Of particular importance are five outstanding reviews by authorities in this field that highlight many of the latest developments and current activities.

In this era of exciting progress mentioned above, Professor John V. Wehausen of the University of California stands out uniquely as the most distinguished individual in bringing light to all of us on the power of mathematical methods in solving practical hydrodynamic problems. His landmark article on "Surface Waves" with Professor E. V. Laitone is an indispensable companion to any worker in this field. Through his teaching, his students, and his outstanding research contributions, his influence can be felt worldwide. The annotated participant list reflects this well. In honor of his retirement, it is fitting that we dedicate these proceedings to Professor Wehausen, a distinguished colleague and an admirable teacher.

I am grateful to the National Science Foundation and the Office of Naval Research for the sponsorship of this workshop. George Lea (NSF) and Choung M. Lee (ONR) have been most supportive of the idea from the beginning. The smooth running of the entire program is a credit to Ms. Linda Reid of University Extension, whose expert help and advice have made many of the organization tasks an enjoyable experience for me.

ORGANIZING COMMITTEE

Chairman

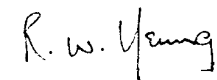

Ronald W. Yeung

Members

William C. Webster

Contents

Preface	iii
LINEAR THEORIES AND APPLICATIONS	
Part I	
<i>Chairman:</i> H. Chiu, Gulf Oil Company, Houston, Texas, USA	
<i>Invited Review: Ship Motions and Wave Loads</i> , J. R. Paulling	1
Strip Methods for Motions and Wave Loads in Following and Oblique Seas and Comparison with Experiments , S. Takezawa, T. Hirayama, K. Nishimoto, and K. Kobayashi	12
Wave Induced Mean Shifts in Vertical Absolute and Relative Motions , J. F. O'Dea	32
Elastic Response of Shallow-Draft Ships Advancing in Short Head Waves , R. Hosoda, Y. Yamauchi, and K. Taguchi	49
<i>Discussions</i>	68
Part II	
<i>Chairman:</i> J. V. Wehausen, University of California, Berkeley, USA	
<i>Invited Review: New Directions in Experimental Methods</i> , N. Ohkusu and T. Takahashi	76
Wave Loads on a Floating Solar Pond , T. Miloh	110
An Analysis of a Wave-Power Absorber , G. Nihous and W. C. Webster ..	132
Approximate Impedance Methods for Wave-Energy Absorption by Devices in Harbours , D. V. Evans and B. M. Count	163
Prediction of Bow Flare Impact Pressure by Momentum Slamming Theory , J. H. Hwang, Y. J. Kim, K. S. Min, and S. I. Ahn	183
<i>Discussions</i>	202
NONLINEAR SHIP AND PLATFORM MOTIONS	
Part I	
<i>Chairman:</i> R. W. Van Hoof, Conoco Oil Company, Houston, Texas, USA	
<i>Invited Review: Second-Order Hydrodynamic Effects on Ocean Platforms</i> , T. F. Ogilvie	205
Drift Forces and Moment on SWATH Ship in Oblique Waves , Y. S. Hong ..	266
Slow Drift Motions by Multiple-Scale Analysis , Y. Agnon and C. C. Mei ..	283
Simplified Three-Dimensional Method for Calculating Drift Forces on Ships and Semisubmersibles in Waves , P. Kaplan	305
Nonlinear Ship Motions in Shallow Water , R. H. M. Huijsmans and R. P. Dallinga	321
<i>Discussions</i>	340
Part II	
<i>Chairman:</i> C. M. Lee, Office of Naval Research, Washington, D.C., USA	
On Second-Order Motion and Vertical Drift Forces for Three-Dimensional Bodies in Regular Waves , B. Molin and J.-P. Hairault	344
Hydrodynamic Analysis of Dynamically Positioned Vessels , H. J. J. van den Boom and U. Nienhuis	363
Simulation Analysis of Ship Motions in Waves , V. Ankudinov	384
The Effect of Short-Crested Sea on Second-Order Forces and Motion , T. Marthinsen	404
<i>Discussions</i>	415
ASPECTS OF LINEAR AND NONLINEAR HYDRODYNAMICS	
Part I	
<i>Chairman:</i> R. F. Beck, University of Michigan, Ann Arbor, USA	
<i>Invited Review: Three-Dimensional Wave Interactions with Ships and Platforms</i> , J. N. Newman	418
An Integral Equation for the Floating Body Problem , T. S. Angell, G. C. Hsiao, and R. E. Kleinman	443
On the Precision of Various Hydrodynamic Solutions of Two-Dimensional Oscillating Bodies , M. Takagi, H. Furukawa, and K. Takagi	450
Energy Relations in Slender-Ship Theory , P. D. Sclavounos	467
Computations of the Coupled Response of Two Bodies in a Seaway , J. H. Duncan, R. A. Barr and Y. Z. Liu	491
<i>Discussions</i>	512
Part II	
<i>Chairman:</i> R. D. Cooper, Flow Research Inc., Silver Spring, Maryland, USA	
<i>Invited Review: Nonlinear Gravity Waves</i> , H. C. Yuen	524
On the Problem of Seiche Over Basins of Variable Depth , G. R. Ghanimati and P. M. Naghdi	549
The Shedding of Vorticity by a Circular Cylinder , W.-K. Soh	560
Separated Flow Around Circular Cylinders , B. Pettersen and O. M. Faltinsen	575
<i>Discussions</i>	599
List of Participants	602
