

Subject Index

- Accelerated fluid, stability problems 648, 651–653.
- Added masses in ship theory 567.
- Air-water interface 645, 650.
- Airy functions 487, 511, 600.
- Aperture of a surface-wave system 485–489.
- Archimedes' law 565.
- Asymptotic expansion for late times 472, 510, 512.
- Average position of wave crest 508–509.
- Barrier in a long canal 527, 529.
- Basin of circular planform, shallow-water approximation 672.
- Basin with elastic restoring forces 628.
- Basin of rectangular form, shallow-water approximation 671.
- Basin with sloping side-walls, waves 624–627.
- Basins of different shape 623.
 - , infinitesimal waves 620–631.
- Beach, waves on it 537–542, 545, 547–551.
- BERNOULLI'S equation 449, 454.
- Body of revolution, submerged 577.
- Bottom covered with dipole sources 571.
 - , irregular 569–571.
- Boundaries of basins, special selection 622.
- Boundary conditions at a beach 537, 548.
 - — for capillary-gravity waves 631–632.
 - — at a free surface 454.
 - — at infinity 471–472.
 - — at an interface 451–455.
 - — at a rigid surface 454–455.
- Bounded basin, surface waves 620–631.
- Breaking of wave crest 681.
- Breakwaters 544, 545.
- Canal theory of tides 669.
- Canal, wave resistance of a ship in it 581.

- Canal waves of long wavelength 669.
- — — —, bounded canal 670, 681.
- Canonical form of a hyperbolic equation 691.
- Capillary-gravity waves 511, 614, 631–638.
- — generated by a point sources 636–637.
- — initial-value problem 614, 631, 636.
- —, velocity 514, 614.
- Capillary waves, existence theorem 757.
- — of large amplitudes 746–749.
- —, orbits in second-order infinitesimal-wave approach 661.
- Carriage containing water, periodic motion 628.
- CAUCHY'S integral 534.
- Cauchy-Poisson initial-value problem 603, 607–614.
- — — — for superposed fluids 614.
- — — — with surface tension 614, 631.
- Cauchy principal value of an integral 476.
- Cauchy-Riemann equations 470.
- Cavitating hydrofoil 586–587.
- Characteristics, in shallow-water theory 676, 677ff.
- Chezy formula of hydraulics 697.
- Circular cylinder, horizontal reflection of surface waves 528.
- —, submerged 574–577.
- —, vertical, diffraction of surface waves 544.
- Circular-cylinder basin, shallow-water approximation 672.
- —, vertical motion 653.
- —, waves 623.
- Circular orbits of first-order infinitesimal-wave theory 499, 501.
- —, modifications by second-order infinitesimal-wave theory 660, 665.
- — in ocean waves 499, 501.
- CISOTTI'S differential-difference equation 611.
- Cnoidal wave 462, 654, 667, 702, 707.
- —, existence theorems 751–753.
- —, limiting height 712.
- —, second approximation to its profile 709.

- Complex variables for infinitesimal surface waves 470–471.
- Complex velocity 471.
- Complex velocity potential 470, 480, 489, 505.
 - — — for finite depth 482, 490, 494–495.
- Composite wave, second-order infinitesimal wave theory 662.
- Confluent hypergeometric functions 613.
- Continuity equation 448, 450.
- Convolution theorem 492.
- Coordinate choice for surface waves 447, 456, 466, 475, 485.
- Critical depth for capillary-gravity waves 633.
- Critical frequencies of canal waves 502.
- Critical velocity for long waves 669, 676, 713.
- Cylinder see circular cylinder.
- Cylinders of any cross section, submerged 576.
- Cylindrical coordinates for surface waves 485.
- D'Alembert solution of the wave equation 669.
- Dam breaking 681.
- Damping coefficients in ship theory 567.
- Damping by thin fluid layer covering surface 646.
 - of waves in viscous fluids 639, 646, 631.
- δ function 599, 602, 637.
- Depth of water see also finite depth.
 - —, determination 673.
- Differential-difference equation of CISSOTTI 611.
 - — of LEVI-CIVITA 726–727.
- Differential equations of elliptic type 667, 683.
 - — of hyperbolic type 667, 673, 683, 691.
- Diffraction of water waves by a freely floating body 566–567.
 - — —, general obstruction 543.
 - — — by a horizontal cylinder 545.
 - — — by a vertical cylinder 544.
 - — — by a vertical half-plane 544, 560.
- Dimensional analysis in initial-value problems 610, 611.
- Dipole approximating bow and stern of a ship 582.
- Dipole singularity 484, 487, 489, 577.

- Dipole source covering bottom 571.
- Discharge rate 569.
- Dispersion law of capillary-gravity waves 614, 633.
- Dispersion relations of surface waves 502, 507, 513–515, 518, 550.
- Dissipation of waves in viscous fluids 639.
- Dock problem 527, 536–537, 545.
- Drag see also wave resistance and viscous resistance.
- Drag of a hydrofoil 586.
- Edge wave of Stokes type 550.
 - — of Ursell type 551.
- Eigenvalues of basin waves 623–627, 630, 652.
 - of modes in a bounded canal 670, 671.
- Elastic medium and fluid 455.
- Elastic restoring forces of a movable basin 628.
- Ellipsoid, submerged 577.
- Elliptical orbits of first-order infinitesimal-wave theory 500, 501.
 - —, modifications by second-order infinitesimal-wave theory 661.
- Elliptic differential equation 667, 683.
- Elliptic functions of JACOBI 706ff.
- Energy flux in surface wave 519.
- Energy integral for free-surface motion 718–721.
- Energy propagation in surface waves 516–522.
 - —, second-order infinitesimal-wave theory 661.
- Energy of surface waves 458–460.
- Epicycloids in hodograph plane 686, 692–694, 701.
- Equation of continuity 448, 450.
- Equation of state 449.
- Equations of motion 448, 450.
- Eulerian description 447.
- Exact solutions in surface-wave theory 714–757.
- Existence proof for the cnoidal wave 462, 668.
 - — for the solitary wave 462, 668.
- Existence of solutions approached by infinitesimal waves 654.
- Existence theorem for capillary waves 757.
- Existence theorems for surface waves 749–757.

- Expansion parameter of shallow-water theory 462, 667, 704.
- Experimental investigation of capillary dispersion 633–634.
- Explosion under water 619.
- Fifth-order infinitesimal-wave approach for progressive waves 663, 665.
- Finite-amplitude waves see also solitary and cnoidal waves.
 - —, limiting height 703, 712ff.
- Finite depth, complex velocity potential 482, 490, 494–495.
 - —, effect on wave profile 659, 660.
 - — for progressive ocean waves 499.
 - — for standing ocean waves 496, 498.
- First-order shallow-water approximation 467, 469.
- Fishline problem 637.
- Floating body 563ff.
- Flow about submerged obstacles 571–573.
 - over an uneven bottom 569–571.
- Forced standing waves in viscous fluids 643.
- Forces on a hydrofoil 586.
 - on a ship 567, 580,
 - on a submerged body 573–574.
 - on a submerged cylinder 576.
- Fourier analysis of initial-surface profile 507, 613–614.
- Fourier integral 507, 523,
- Fourier series for surface waves 522ff.
- Fourier transform 475.
- Fredholm equation for surface waves 535, 543.
- Free-surface 446ff.
 - —, boundary conditions 454.
- Freely floating body 563ff.
 - — —, diffraction of water waves 566–567.
 - — —, initial displacement 619.
- Freely floating sphere 568.
- Fresnel integrals 545, 613.
- FRIEDRICHS' shallow-water expansion see shallow-water approximation.

- Froude-Krylov hypothesis 566.
- Froude number 581, 675, 676, 695, 699, 701.
 - — for a cnoidal wave 713.
 - — for a solitary wave 713.
- Fundamental equations for first-order shallow-water approximation 667–668.
- Gas dynamics, connection with shallow-water theory 677, 681.
 - —, linearized 669.
- Generation of waves by oscillating bodies 553ff.
- Geometrical boundary 459.
- GERSTNER'S wave 742–744.
 - —, uniqueness theorem 756.
- Gliding on a water surface 587–592.
- Gravity-capillary wave 614, 631–638.
- Gravity-capillary waves, velocity 514, 614.
- Gravity wave 508, 510.
- Gravity waves, velocity 513–514.
- GREEN'S function of second kind for surface waves 524, 543, 547, 559, 579, 604ff., 614, 616, 621.
- Group velocity and energy propagation 519–520.
 - — of surface waves 506, 509, 513, 514, 518.
- Harmonic vibrations see also oscillations.
- HAVELOCK'S method for the investigation of wave crests 735–736.
- Heaving circular cylinder generating waves 563.
- Heaving hemisphere generating waves 562.
- Heaving motion of a floating body 562, 619.
- Heterogeneous fluid 506.
- Heterogeneous fluids, theorems on wave motion 722–725.
- H-function of KOCHIN 556–558, 573–574.
 - —, time-dependent motion 617.
- Hodograph plane 683–684.
- Hodographic graphical construction 692.
- Hull shape, effect on wave resistance 580–581.
- Hydraulic analogy of shallow-water theory 668, 673.
- Hydraulic friction 696–697.

- Hydraulic jump 685, 689, 692, 696ff.
- —, oblique 700–701.
- Hydraulics 446.
- in open channels, steady one-dimensional case 695–701.
- Hydrofoil close to surface 586.
- of finite span 586, 590.
- , thin-body approximation 583–587.
- Hydrostatic approximation 468.
- Hyperbolic differential equation 667, 673, 683.
- — —, canonical form 691.
- Hypergeometric functions 612, 672.
- Ice sheet on water 455.
- Ideal fluid 448, 450.
- Infinitely deep fluid 456.
- Infinitesimal-wave approximation 456, 462, 463–466, 469ff.
- — —, limits of application 522.
- — — for viscous fluids 638–646.
- Infinitesimal waves, higher-order approximation 653–667.
- — in irrotational flow 464.
- Initial-value method of HAVELOCK 472, 513, 515.
- Initial-value problem for capillary-gravity waves 614, 631, 636.
- — — of CAUCHY and POISSON 603, 607–614, 631.
- — —, method of images 610.
- — —, two-dimensional waves 610–614.
- Initial-value problems for surface waves 603ff.
- Integral equation method for three-dimensional surface waves 545.
- — — for two-dimensional surface waves 533, 535, 537, 543.
- Integral equation of NEKRASOV 729–730.
- Integral equations of VILLAT 730, 742.
- Interface, stress continuity 451.
- of two immiscible fluids 451–455.
- Interfacial waves 502–506, 634–635.
- —, existence theorems 755.
- —, viscous fluids 644–646.
- Inverse method of boundary-condition construction 736.

- Irrotational flow 449, 462.
- Irrotational waves, existence theorems 749–755.
- Isentropic flow 686.
- Jacobian elliptic functions 706ff.
- Jet thrown out by a glider 588.
- JOHN'S inverse method 740–742.
- Kinematic boundary condition 451, 452, 455.
- Kinematic viscosity 447.
- Kinematical theorems for free-surface motion 715–716.
- KIRCHHOFF'S approach to beach waves 537–542, 624–627.
- KOCHIN'S formulas for derivatives of Bessel functions 609.
- KOCHIN'S H-function 556–558, 573–574.
- —, time-dependent motion 617.
- Kutta-Joukowski condition 560, 584, 588.
- Lagrangian description 447.
- Laplace equation 462, 667.
- Laplace transform 483, 491.
- Lattice-point method 691.
- Laval nozzle 695.
- Legendre polynomials 479, 671.
- LEVI-CIVITA'S differential-difference equation 726–727.
- Lift of a glider 592.
- of a hydrofoil 586.
- Limiting height of finite-amplitude waves 703, 712ff.
- for infinitesimal surface waves 463, 469, 554.
- of shallow-water approximation 668ff.
- Linearization parameter 463, 466, 526, 554.
- Linearized gas dynamics 669.
- LIOUVILLE'S theorem 480, 610.
- Long wavelengths in canal 669.
- Mach angle 692.
- Mach lines 687.
- Mass transport in free-surface motion 716–718.
- — in second-order infinitesimal wave theory 661.
- — in viscous fluid 666.

- Material derivative 451.
- Mathieu functions 652–653.
- Maximum amplitude waves 731–736, 749.
- Membrane generating waves 558–559, 616.
- Metacenter 565.
- MICHELL'S integral 580–581.
- MICHELL'S method for the investigation of wave crests 732–734.
- MILNE-THOMSON'S circle theorem 574.
- Minimum of wave velocity for capillary-gravity waves 633.
- Modes of waves in a basin 623–627.
- Momentum integrals for free-surface motion 718–721.
- Momentum of a surface wave 461.
- Movable basin, surface waves 627–631.
- Navier-Stokes equations 448.
- Negative cnoidal wave 714.
- NEKRASOV'S transformation and integral equation 728–730.
- Nekrasov-Yamada method for the investigation of wave crests 734–735.
- NEUMANN'S boundary problem 622.
- Nozzle design 685, 693, 695.
- Obstructions in long canal 526ff.
 - originating diffraction of surface waves 543–545.
- Ocean floor, waves from its sudden motion 617–619.
- Oceanography 446.
- Open-channel flow 466.
- Orbits see circular orbits, elliptical orbits, particle orbits, trajectories.
- Orthogonality of elementary solutions 522, 523.
- Oscillating basins, resonance waves 627, 629.
 - —, stability 651–653.
- Oscillating boundaries, wave formation 553–563.
- Oscillating submerged body generating waves 554–563.
- Oscillations of a freely floating body, oncoming waves 566–567.
- Oscillations of a freely floating body, steady case 563ff.
- Oscillator in a wall generating waves 558–559, 616.
 - not in a wall generating waves 560–562.

- Parameter of linearization 463, 466, 526, 554.
- Particle orbits, second-order infinitesimal-wave approximation 660–661.
 - — in surface waves 496–497, 499, 501, 660, 661, 665.
- Pendulum bob, containing fluid 631.
- Periodic wave of maximum height 732.
- Periodic waves in a basin 621–622.
- Permanent finite-amplitude wave forms 702, 703.
- Perturbation method for surface waves 462.
- Phase shift between pressure and displacement in viscous fluids 643.
- Phase velocity of an edge wave 550.
 - of progressive ocean waves 499.
 - of waves in a canal 502.
 - of waves at an interface 503.
- Physical boundary 459.
- Planing on a water surface 587–592.
- Plemelj-Sokhotskii theorem 535, 583, 613.
- Polar coordinates for surface waves 475, 476.
- Port basin waves 623.
- Potential flow 448, 450.
- Prandtl-Meyer expansion 693.
- Prandtl-Meyer function 688, 690.
- Prandtl relation for shock waves 698.
- Pressure-displacement phase shift in viscous fluids 643.
- Pressure distribution, any dependence on time 614–615.
 - —, moving with constant velocity 597–602, 637.
 - —, second-order infinitesimal-wave theory 665.
 - —, suddenly applied 619.
- Pressure distribution along a glider 592.
- Pressure at a free surface 454, 460, 472.
- Pressure at an interface 453.
- Pressure periodic in time, generating waves, three-dimensional case 593–595.
 - — —, generating waves, two-dimensional case 595–597.
- Pressure point (δ function) 599, 602, 637.

- Principal value of an integral 476.
- Progressive surface wave 456.
- Progressive wave, second-order infinitesimal-wave approach 654–662.
 - —, third-order infinitesimal-wave approach 657–658.
- Progressive waves in a canal 502.
 - — in an infinite ocean 498–501.
- Propagation of energy in surface waves 515–522.
 - — — —, second-order infinitesimal-wave theory 661.
- Propagation of an initial elevation on a free surface 507–513.
- Propagation velocity of a solitary wave 710, 711.
- Pseudo-exact solutions of DAVIES and PACKHAM 736, 744–746.
- Pulsating source in three dimensions 475.
 - — in two dimensions 479.
- Pulsating vortex in two dimensions 479, 483.
- Radiation condition 471, 475, 493, 595, 616.
- RAYLEIGH'S higher-order infinitesimal-wave approximations 663.
- Rectangular basin, waves 623.
- Rectangular canal, infinitesimal-wave approximation 502.
 - —, shallow-water approximation 670–671, 696.
- Reduction method 525, 545, 546.
- Reflection coefficient of surface wave at obstruction in canal 527, 528.
- Reflection from horizontal circular cylinder 528.

- Ripples (capillary waves) 633.
- Rolling of a ship 555.
- Rotational waves, existence theorems 755–756.
- RUDZKI'S inverse method 737–738.
- RUDZKI'S transformation 727.
- SAUTREAU'S inverse method 736–737, 742.

- Second order infinitesimal-wave approach for progressive waves 654–662.
- Second-order shallow-water approximation 468, 469.
- Sector-shaped basin, waves 624.
- Semi-infinite channel 559.
 - — for infinitesimal surface waves 472–475.
- Shallow-water approximation 456, 462, 466–469, 667ff.
 - —, first-order fundamental equations 667–668.
 - —, non-linear theory 676, 701.
- Shallow-water approximations of higher order 701ff.
- Shallow-water results, connection with in-finitesimal wave approximation 673.
- Shallow-water second-order approximation 668, 703, 704.
- Shallow-water third order approximation 703, 705, 707.
- Ship, dipole approximation 582.
 - floating on water 563ff.
 - heading into waves 567.
 - rolling 555.
- Ship, forces on its body 567, 580.
 - , transient problems 616–617.
- Shock polar 701.
- Shock wave, connection with shallow-water theory 681, 693, 698
- Short-crested wave 545, 547, 549.
- Simple backward-facing wave 679–680.
- Simple compression wave 689, 694.
- Simple expansion wave 689, 694.
- Simple forward-facing wave 679.
- Simple wave 678.
- Singular solutions including surface tension 635–638.
 - — in infinitesimal surface-wave theory 475, 478, 479.
- Singularities of constant strength in uniform motion 489.
 - of higher order 481, 484, 495.
 - in second-order infinitesimal-wave approach 656–657.
- Slender body 573, 577, 578–579.
- Slender profile in shallow water 675.

- Solitary wave 462, 654, 667, 702.
 - —, existence theorems 751–753.
 - —, limiting height 712.
 - —, propagation velocity 710, 711.
 - —, second approximation to its profile 710, 711.
- Source of constant strength in uniform motion 483.
- Source distribution replacing ship's hull 581.
- Source function see GREEN'S function.
- Source of position and strength varying with time 490–495.
 - of pulsating strength in three dimensions 475.
 - — — — in two dimensions 479.
- Source-type solutions including surface tension 635–638.
- Specific heat ratio 2 677, 681.
- Spectrum 507.
- Sphere floating freely 568.
 - heaving on water surface 562.
 - submerged 577.
- Spheroid, submerged 577, 578.
- Spread of hump on a free surface 508.
- Stability of motion, interface between moving fluids 648–650.
 - —, interface of stationary system 646–648.
 - —, interfacial waves 634, 635.
 - —, moving basin 630–631.
 - —, second-order infinitesimal-wave theory 663.
 - —, surface tension effects 647.
 - —, vertical oscillation of a basin 651–653.
 - —, viscosity effects 647–648.
- Standing capillary-gravity waves 632–634.
- Standing surface wave 458.
- Standing waves in basins 622–627.
 - — in a canal 502.
 - — in an infinite ocean 495–498.
 - — in viscous fluids 641–646.
- Steady state as asymptotic limit state 472, 506ff.

- Steady supercritical flow, shallow-water first-order approximation 682–695.
- STOKES' edge waves 550.
- STOKES' second method 654, 726.
- STOKES' theorem on wave crests 731.
- Stratified viscous fluids, interfacial waves 644–646.
- Streamlines for standing ocean waves 496.
- Stress continuity at an interface 451.
- Stress tensor 452.
- Struve function 533.
- Sturm-Liouville problem 523.
- Subcritical flow in an open channel 673, 675, 676.
- Submarine explosion 617–619.
- Submarine, wave resistance 577.
- Submerged moving dipole 487, 489.
- Supercritical flow in an open channel 673, 675–676, 696.
- Supercritical steady flow, shallow-water first-order approximation 682–695.
- Surface normal 451.
- Surface tension 451, 452, 460, 614, 631–638.
 - —, effect on cnoidal waves 714.
 - —, effect on second-order infinitesimal-wave approach 656ff.
 - —, effect on stability 647.
 - — in viscous fluids 638, 641ff., 646.
- Surface waves, dispersion relations 502, 507, 513–515, 518, 550.
 - —, initial value problem 603ff.
- System of n fluids 506.
 - of two fluids see interface.
- Thin floating body, heaving motion 620.
- Thin hydrofoil 583–587.
- Thin-ship approximation 572, 579–583.
 - —, transient problems 616–617.
- Thin-wing approximation 572, 584, 590.
- Third-order infinitesimal-wave approach for progressive waves 657–658.

- Three-dimensional surface waves on the beach 545, 547–551.
 - — — in a canal 551–553.
 - — —, diffraction 543–547.
 - — — higher-order infinitesimal-wave theory 662.
- Tidal wave 466, 668, 669.
- Trajectories of particles in surface waves 496–497, 499, 501, 660, 661, 665.
